

HAURAKI

PILING LTD.

Samplings Plant, Gisborne Wick Drain

Hauraki Piling Ltd was awarded the contract to supply & install 40,000 lin metres of wick drains, at an average 8m depth, by main contractor Fulton Hogan Ltd for the new plywood mill for Samplings in Gisborne.

4,700No. wick drains were installed on a 1.5m grid using a non-vibratory method up to depths of 15m through soft silts, to allow drainage of the sub-strata below a proposed plywood mill in Gisborne. Wicks drains are left with 300mm protruding above ground level for inclusion into the overlying sand blanket.

Project Details:

Wick Drains: 4,700No. up to 15m deep.

Client: Fulton Hogan Ltd.
